

FIVE GUYS

Focus Development provided general contracting services for more than 50 Five Guys restaurants across the United States. All of the buildings varied in size and complexities and included ground up construction and build-outs in renovated shopping centers or strip malls.

The primary components of the Five Guys build-out projects include an interior fit-out with all new MEP system installations, grease hoods, walk-in freezers and coolers, food service equipment and architectural finishing supporting the Five Guys Burgers and Fries brand.
